Monthly Order Volume vs Average Delivery Time

Average Fulfillment Time by Stage

Customer Satisfaction by Delivery Delay

Executive Summary

- Order demand increased nearly **9x** between January and November 2017 while operations generally scaled effectively.
- Shipping was the primary contributor to delivery delays and accounted for most of the deterioration during peak-demand periods.
- Customer satisfaction declined as delivery delays increased, with ratings dropping most sharply for delays exceeding 4 days.

Overall Insight (Sep 2016–Aug 2018)

- Shipping was the primary bottleneck throughout the analysis period, accounting for the largest share of the delivery cycle.
- During the November 2017 demand surge, shipping time increased by over **2.5 days**, while approval and seller fulfillment remained relatively stable.
- From April 2018 onward, delivery performance improved primarily due to reductions in shipping duration.
